## COMMUNICATION

With communication being a vital part of our operations to ensure we all get home safe, it's great to see that we have had a lot of Hazard Id's highlighting how important it is when we identify potential risk on our worksites and how communicating makes a safer workplace.

From a change in tasks on site, change in terrain, machine interaction, and even traffic. It's great to see that we are all identifying these, communicating with each other, making a plan together, ensuring the safety of everyone, documenting and then monitoring.

All these things come from you guys all understanding how important communication is.

Our operations are constantly changing and we need to keep doing what we are doing, this keeps the positive flow on effect and helps keep us all in a safer workplace.

### SO REMEMBER

- 📌 Keep identifying potential risk
- 📌 Keep communicating
- 📌 Keep recognising safe behaviour
- 📌 Keep reporting Hazard Id's
- 📌 Keep documenting changes
- 📌 Keep each other safe
